HEMAVIEW SEEING IS BELIEVING!

Special Offer; 2 for 1 Hemaview live blood screening

Hemaview is an exciting and amazing blood screening tool I am now offering at the clinics. It can help determine underlying factors which maybe be contributing to such symptoms of feeling 'unwell', fatigue, difficulties losing weight/fat, feeling stressed and/or sluggishness.

Seeing your live blood instantly on the screen can give you an insight into your overall health and how to increase your energy, burn fat more efficiently and feel less stressed.

Our special offer of 2 for 1 means you can have two Hemaview screenings for the price of one; either use both yourself or give one away to a friend or family member.

Valued at \$54.45 simply bring this voucher along with you to your next appointment.

Ring today for your 2 for 1 special offer and book your appointment 65823424

Offer ends 15th July 2010

A Hemaview™ Case Study

Initial Consultation - Week One

This 27 year old female patient was fatigued. The patient described feeling very tired – like nothing she had ever experienced before. All standard pathology tests had failed to reveal any cause for her fatigue. However with Hemaview™ her Practitioner was able to determine that she had signs of a subclinical nutritional deficiency that was reducing oxygen delivery to her tissues and was thus contributing to her fatigue

The Practitioner in this case was able to utilise this information to recommend the following:

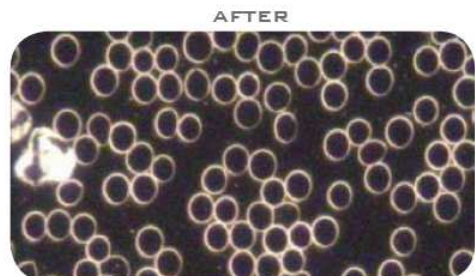

- Healthy diet and lifestyle changes
- Increased sleep
- o Hemagenics Intensive Care – one tablet twice daily
- o BioQ100 – one capsule twice daily

Follow Up Consultation - Week Eight

Within eight weeks the patient was feeling better and more energetic – her energy levels had increased from 3/10 to 7/10 . Her Hemaview™ screening showed some changes in blood parameters as well

Follow Up Consultation - Week Sixteen

Treatment was continued, and by the 16th week the patient felt much better and stronger – she could not believe the difference and was pleased she was feeling more energetic and alive again. The patient was even able to recommence exercising, which she had not done for months due to her fatigue. Her Hemaview™ screening showed significant improvements in blood parameters
